

6 THINGS TO KNOW BEFORE YOU REPLACE YOUR WINDOWS

New windows are one of the best upgrades for comfort and energy bills in the Central Valley, but only if they are chosen and installed right. Here is what to know first.

- 1 LOW-E GLASS MATTERS MOST HERE**
In our climate, Low-E coatings and double or triple glazing block the heat that drives up your AC bill. The glass package matters more than the brand name.
- 2 A TIGHT, CUSTOM FIT IS EVERYTHING**
Even a great window leaks air if it is not measured and installed for a weatherproof seal. Installation quality makes or breaks the result.
- 3 REPAIR IS SOMETIMES SMARTER**
A failed seal or broken glass can often be repaired for far less than full replacement. An honest contractor tells you when.
- 4 STYLE AFFECTS FUNCTION**
Sliders, double-hung, casement, and picture windows each ventilate and seal differently. We help you match style to each opening.
- 5 ENERGY SAVINGS ARE REAL BUT VARY**
Efficient windows can noticeably lower bills, but savings depend on your current windows, home, and glass package. Be wary of anyone promising exact numbers.
- 6 ALWAYS GET IT IN WRITING**
Get a clear, itemized, no-obligation quote, and verify the contractor license (ours is CA #1129883) before you commit.

CLAIM YOUR FREE WINDOWS INSPECTION

We will assess your home, document what we find, and give you honest, upfront pricing. No pressure, no obligation.
